

Energy Services Company

Your energy conservation professionals

You have lights, but are you using them effectively? Your students are doing well, but could they be doing better? Your building is warm in the winter and cool in the summer, but is your temperature always ideal? Your utility costs are low, but could they be lower?

Like any business or school, there's probably room for greater efficiencies. Fortunately, when your electricity is provided by a distributor of TVA power, you have the opportunity to significantly reduce your long-term utility costs and improve your building performance. That opportunity is found with Energy Services Company (ESCO).

ESCO is an energy consulting service that is available to distributors of TVA power and their customers. By inspecting and analyzing your current energy system, our experts can design, develop, install and monitor a lighting and HVAC system that will lessen your overhead and increase your productivity.

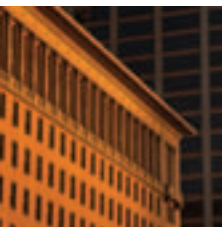

Is there a better source for energy advice than the company that provides your power day after day, year after year? TVA has been providing reliable, affordable power for 70 years. Long after your new system is running efficiently, long after you have begun to realize the cost savings afforded by your ESCO contract, we will be here to answer your questions and meet your needs.

What we can do

Working in partnership with local electric power distributors and TVA Customer Service Centers, we're able to offer complete, turnkey service that includes:

- Energy audit and evaluation of building systems
- Design, development, installation, and financing assistance for energy-efficient improvements
- Operations and maintenance services
- Follow-up monitoring to ensure results

Our customized solutions may include improvements to your lighting and energy management system, the installation of high-efficiency motors and variable frequency drives, and HVAC upgrades or the use of geothermal systems.

Who we've helped

For years, customers of TVA power distributors to whom optimal utility performance is critical for their business, have counted on ESCO to maximize their building efficiencies and minimize their costs. Our customer list includes:

- Commercial facilities
- Industrial facilities
- School systems
- State and local governments
- Military and federal installations

Product offerings

ESCO offers a wide range of energy-efficient products and services, including:

- Preliminary energy audits
- Evaluation of building systems
- Financing options
- Construction management
- Monitoring and verification
- Detailed energy studies
- Project design and development
- Contracting and installation service
- Operation and maintenance

Savings

Our conservation efforts impact more than just your buildings and your employees. Our work improves your bottom line. By working with ESCO, your savings in energy, maintenance and operations will meet or exceed your investment in implementing our energy conservation measures. We'll also help you by arranging the third-party financing you need to make the initial investments.
